CAREER OBJECTIVE

UAE national and ATS-Fujairah graduate (98.5% GPA, Top 10 across all UAE campuses) with hands-on experience in software development, cybersecurity, and AI. Holding an unconditional offer to study Computing Science at the University of Alberta, Canada (commencing August 2026). Seeking opportunities to contribute to the UAE's digital economy and technology ecosystem upon graduation.

EDUCATION

High School Diploma — Computing & Artificial Intelligence (CAI) | Institute of Applied Technology (ATS-Fujairah)

2021 – 2025 • Fujairah, UAE

- Graduated with 98.5% GPA — ranked Top 10 students across all UAE ATS campuses
- Specialised in computing and artificial intelligence, with advanced projects in AI, computer vision, and embedded systems
- Graduation project (Security-Tech) recognised at school level and formally presented to evaluators
- Completed Cisco Networking Academy CCNA: Introduction to Networks certification
- Attended Python & Satellite Image Processing workshop at Mohammed Bin Rashid Space Centre

Year One Foundation Program — Science | University of Alberta

Aug 2026 – Aug 2027 • Edmonton, Canada • Not Yet Commenced

- Pre-degree foundation year in Science stream, aligned with Computing Science requirements
- Program start: August 28, 2026 — North Campus

Bachelor of Science — Computing Science | University of Alberta

Fall 2027 – 2031 • Edmonton, Canada • Not Yet Commenced

- Unconditional admission accepted — Faculty of Science, North Campus
- Core areas: Algorithms, Software Engineering, AI, Data Science, Systems

PROJECTS

Security-Tech — Wearable AI Officer Safety Device | Graduation Project

2025 • ATS-Fujairah

- Built a Raspberry Pi 4 wearable device to enhance law enforcement officer safety and situational awareness
- Implemented real-time weapon detection (guns and knives) using computer vision and AI
- Developed facial recognition to classify individuals as criminals, fellow officers, or civilians
- Integrated a covert emergency button that silently notifies a connected web dashboard when an officer is in danger
- Integrated AI, computer vision, embedded systems, and web technologies into a unified prototype

InterceptorSim 3D — Browser-Based Air Defense Simulator | Personal Project

2025

- Built a sophisticated browser-based 3D air defense simulation with real-world named weapon systems
- 17 threat systems, 14 interceptor types, Monte Carlo-validated physics engine using Three.js

DLP Chat Log Analyzer — AI-Powered Insider Threat Detection | Research Project

2025

- Built a Node.js/Express tool using the Anthropic Claude API to analyse chat logs for security risks
- Detects sensitive data exposure, policy violations, and insider threat indicators

CERTIFICATIONS & TRAINING

CCNA: Introduction to Networks | Cisco Networking Academy / Institute of Applied Technology

2025

- Covered network protocols, IP addressing, and fundamentals of routing and switching
- Practical lab experience with Cisco equipment and Packet Tracer simulations

Python & Satellite Image Processing Workshop | Mohammed Bin Rashid Space Centre (MBRSC) — ESGRS

2024–2025

- Learned remote sensing principles and satellite data analysis techniques using Python
- Applied skills to monitor and analyse real-world events, including UAE flooding incidents

APPLIED SKILLS — COMPUTING SCIENCE & SOFTWARE DEVELOPMENT

Python Full detection pipeline, data analysis, scripting, satellite image processing using OpenCV and AI models
JavaScript / TypeScript React Native mobile development, Three.js 3D simulations, Node.js/Express backend services

Mobile Development (React Native) iOS and Android app development, Expo, Apple Wallet integration, real-time subscriptions

Backend & Cloud (Supabase / Azure) PostgreSQL database design, Row Level Security (RLS), real-time subscriptions, Azure SQL, Key Vault, resource management

Cybersecurity Network security, MITRE ATT&CK, SOC fundamentals, ethical hacking, CCNA-level networking, DLP analysis

Artificial Intelligence & Computer Vision Trained and deployed real-time object detection and facial recognition models on embedded hardware

Embedded Systems (Raspberry Pi 4) Configured GPIO, UART, CSI camera, GPS, sound sensors, and wireless modules for Security-Tech

3D Graphics (Three.js) Custom 3D physics engine, orbit camera controls, real-time Monte Carlo simulations in the browser

Java Studied as part of the ATS computing curriculum alongside Python for software development fundamentals

LANGUAGES

Arabic (Native) **English** (Professional Proficiency — IELTS 7.0)

Open to internship, sponsorship, and graduate development opportunities in the UAE
